AIM:

To configure unveless LAN using cisco packet bacer.

PROCEDURE:

- i) Create network 3 PCS & a wireless souter.
- ii) Right dick on the wireless router note the It address If would be 192 168.00
 - -> Disable the DHCP server
 - → Same settings
- iii) Click an wireless on the same page
 - -> Change network name to "MY HOME NETWORK"
 - -> Same settings
 - -> Clack an divireless security under wireless e change security meede
 - -> Add key 1: 0123456189
 - -> Then close the window.
- iv) Now assign IP to the PC's

PC0 = 192. 168. 0.5

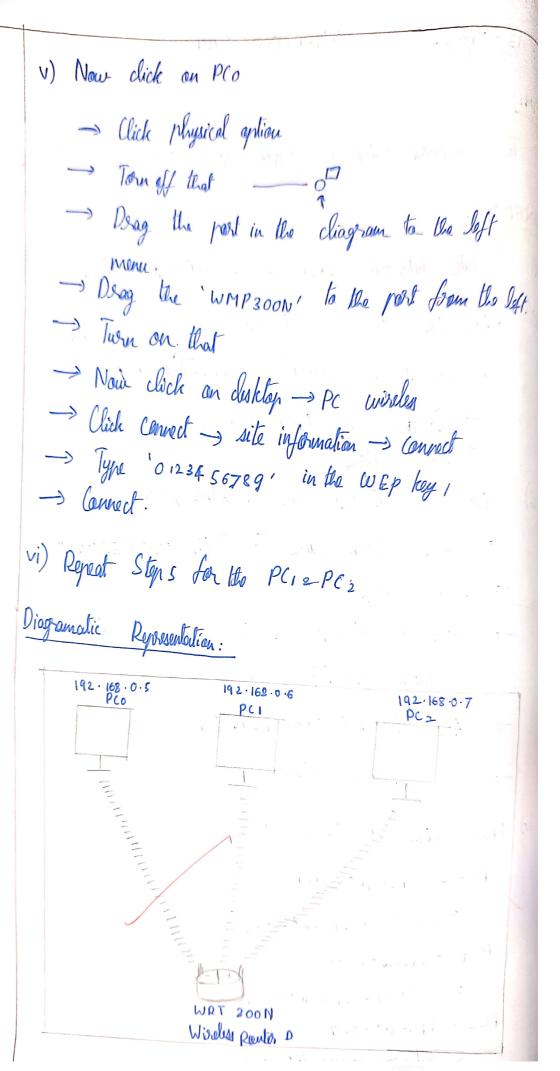

-> galeway - 192.168.0.1

PC1 - 192.168.0.6

-> gateway - 192. 168.0.1

PC2 - 192. [68.0.7 1, Jan 1966]

-> gatourni - 192.168.0·1

OUTPUT:

Thus the packets could be transmitted to univales ranter.

Student Observation:

a) Sorvice set identifier is the name assigned to a unreless network allowing devices to identify & connect to the correct wife. The SSID is brocast by the Louter & helps distinguish one volumer from others.

A security key is a password or code used to related a wireless network, ensuring only authorized users can connect.

RESULT:

Thus wireless LAN how been configured successfully Using CISCO PACKET TRACER.
